Customer Jimmy Stinson, World Radio Network...

The companion is simple to use, stable, good web interface. I am pleased with the control security. Most disc jockeys and some station managers do not need to be able control the transmitter, only take readings.

The manual leaves a little to be desired, especially the software information. Setup can be trial and error on some transmitters with power On/Off but with the correct combination they work great.

We have used the Getner for years. We looked at Burk and Sicon which we have a couple of but have been replaced with the Companion.

We have interfaces for the Crown 10K, Harris 25K, Nexus 2K, and Crowns 150, 2K, 250, 30, and multiple repeaters if needed. For the non-Crowns we make an interface cable or use a punch block for connections.

2515 Toledo Rd, Unit A, Elkhart, IN 46516-5777 574-262-8900

Just a few of the many features...

- Remote Metering/Control/Status function – 20+ can be programmed at once
- Silence monitoring and programmable alarms with e-mail alerts
- Three levels of Password Control
- Low power consumption for ultimate reliability
- Long-term logging of transmitter parameters
- Utilizes Opto-coupled control — no mechanical relays
- Easy path for future upgrades
- Use with your computer, tablet, cell phone, or all three

Users.....	Unlimited
